## NeoMilk® follow-on milk

NeoMilk® follow-on milk is the latest development in calf nutrition, fed directly after colostrum until weaning. NeoMilk® follow-on milk range has been designed utilising the expertise of Cargill Animal Nutrition:

- **Precision nutrition knowledge;** protein to energy ratio, amino acid balance, functional fatty acids and feeding programmes to provide the optimum products, solutions and recommendations.
- **Published research and practical experience of additive technologies;** to promote optimal health, growth and rumen development.
- **Nutrient supply and requirement;** provision of balanced supply of nutrients to meet the calf's requirements for maintenance, growth and health, while not supplying any nutrient in excess that the animal cannot utilise.

### This results in:

- Safety assurance to support digestive health
- Optimal nutrient absorption that encourages early rumen development
- Good mixability; producing a creamy palatable feed that is easy to digest

NeoMilk®  
Prime

NeoMilk® Prime incorporates Cargill's fatty acid technology to shape the gut foundation to optimise nutrient absorption which will maximise early growth.

Available in whey.

Safe, easy to use and suitable for all feeding systems.

Improves daily liveweight gain by

Improves feed efficiency by

Reduces digestive upset

Taller and longer calves

NeoMilk®  
Boost

NeoMilk® Boost integrates Cargill's fatty acid and amino acid technology that fuels calf development for longevity.

Available in whey and skim.

Safe, easy to use and suitable for all feeding systems.

Improves daily liveweight gain

Improves feed efficiency

Improves frame growth

Reduces digestive upset

NeoMilk®  
Beyond

NeoMilk® Beyond comprises Cargill's postbiotic and amino acid technology to support a balanced intestinal microbial community to unleash the genetic potential of calves.

Available in whey and skim.

Safe, easy to use and suitable for all feeding systems.

Improves starter intake

Reduces respiratory challenge

Improves daily liveweight gain by

Improves early lactation yield
